Introduction

An avid and enthusiastic software developer with 3+ years of experience in backend development using technologies such as Spring Boot, JDBC and MySQL, with growing expertise in application security, GenAI and MCP agents. Experienced and motivated in designing and implementing end-to-end solutions. Skilled in solving complex technical challenges and delivering high-quality software.

Education

PES University, BTech in Computer Science and Engineering — Aug 2019 – May 2023

- GPA: 8.6/10

Experience

Software Developer, AT&T — Dec 2025 – Present

- Engineer secure-by-design applications, identifying and resolving security vulnerabilities to strengthen the application security posture.
- Design and develop AI agents and Model Context Protocol (MCP) agents to deliver GenAI-powered solutions.
- Build and enhance enterprise applications using AngularJS and Spring Boot.

Software Development Engineer (Member of Technical Staff), Oracle – Bengaluru — Aug 2023 – Nov 2025

- API Development and performance enhancement by using Multithreading, SpringJDBC, henceforth improving client user experience.
- Developed and maintained enterprise web applications in Oracle APEX using CSS, JavaScript, and PL/SQL for the frontend, and Java Spring Boot for backend API and event handling.
- Designed and implemented a Core Java CLI tool to automate build request submission and tracking, improving developer efficiency and reducing manual intervention.
- Engineered a Python-based SBOM generation system to produce JSON files of build libraries/dependencies for OSCS vulnerability scanning, enhancing security compliance during label builds.
- Led Gradle migration from v7.4 to v8.9, refactoring deprecated libraries and ensuring build process compatibility, resulting in improved build stability and maintainability

Software Engineer Intern, AT&T – Bengaluru — Jan 2023 – Jul 2023

- Developed and optimized backend API services for the AFSCP Tracking System using Java, Spring Boot, JDBC, and MySQL, improving performance and maintainability.
- Migrated legacy systems from Informix CLI-based architecture to a modern web-based platform with MySQL, enhancing usability and reducing processing times.
- Integrated and tested backend services, performed deployments, and resolved production issues based on client feedback.

Projects

Autobin - Smart Dustbin

- Designed an intelligent waste management solution leveraging computer vision and sensor technology to automatically classify and segregate waste into dedicated compartments within a single AutoBin, improving recycling efficiency and reducing manual sorting efforts.
- Tools Used: Python, CNN, IOT

Twitter Sentiment Analysis using Spark Streaming

- Implemented a real-time sentiment analysis system leveraging Big Data technologies, including Hadoop and Apache Spark, to process live Twitter data streams. Utilized NLP techniques to classify tweets into positive, negative, and neutral sentiments, enabling insights into public opinion trends. Link : Springer Chapter
- Tools Used: PySpark, Hadoop

Predicting Code Runtime Complexity using Static Code Analysis and ML Techniques

- Designed and implemented a machine learning model that uses abstract syntax trees, control flow graphs and graph neural networks to predict program runtime complexity in Big-O notation without code execution.

Skills

Java, Spring Boot, AngularJS, Python, JDBC, MySQL, MongoDB, PL/SQL, JavaScript, Figma (UI Design), GenAI, MCP Agents, Application Security, NLP, Machine Learning and Neural Networks
